

Automatic Ticket Shelf Rollforming Line

This Samco high efficiency rollforming line allows for the manufacture of shelf products from raw coil to finished shelf. This turn-key solution allows coil strip feeding to a pre-punch and pre-notch system, then cut to length blanks, which are in turn rollformed and wing-bent into a complete shelf.

Key Features include:

- Fully automated width and length changeovers on the shelf via duplex type rollformer
- Feed to a finished part ensures minimal operator involvement and high quality products
- Variable production speeds of up to 50fpm depending on product sizes
- Able to run ticket, boxed, and open profiles depending on roll tooling
